Subject: Spring Viremia of Carp Interim Rule and the Importation of Susceptible Fish Species

To: Importers, Brokers, and Other Interested Parties

This document provides information on the importation into the United States of certain live fish species that are susceptible to spring viremia of carp (SVC) disease. The Animal and Plant Health Inspection Service (APHIS) published an interim rule on August 30, 2006, entitled "Spring Viremia of Carp: Import Restrictions on Certain Live Fish, Fertilized Eggs, and Gametes." As a result of this publication, regulations are now in place to govern the importation of eight live species of fish into the United States. **The rule will be implemented on Monday, October 30, 2006.** At that time, the following live species of fish will have additional requirements under which they may be imported into the United States:

- Common carp, including koi (*Cyprinus carpio*);
- Grass carp (*Ctenopharyngodon idellus*);
- Silver carp (*Hypophthalmichthys molitrix*);
- Bighead carp (*Aristichthys nobilis*);
- Crucian carp (*Carassius carassius*);
- Goldfish (*Carassius auratus*);
- Tench (*Tinca tinca*); and
- Sheatfish (*Silurus glanis*).

Live fish of these species, their fertilized eggs, and gametes may be imported into the United States if they are accompanied by a Veterinary Services (VS) Form 135 import permit and an official health certificate. An application for the import permit (VS Form 129) may be obtained on the Internet at <http://www.aphis.usda.gov/vs/ncie/pdf/vs17-129.pdf>. Instructions for this form are located at http://www.aphis.usda.gov/vs/pdf_files/vs17-129-cover.pdf.

Live fish of these species, their fertilized eggs, and gametes may transit the United States if accompanied by an import permit and if certain conditions are met to ensure that SVC is not introduced or spread to any fish populations in the United States. A health certificate is not required for transiting fish of these species. In addition, the rule contains details about the limited U.S. ports of entry through which SVC-susceptible fish, their fertilized eggs, and gametes may be imported.

This document is not intended to provide complete details for the importation of live fish species that are susceptible to SVC. For additional information, the interim rule may be viewed at <http://www.regulations.gov/fdmspublic/component/main>. From that Web site,
